SUMMARY

Cybersecurity undergraduate at BINUS University with hands-on experience developing forensic challenges, building privacy tools, and automating CTF infrastructure. Seeking an internship in digital forensics, security operations, or defensive security tooling.

EDUCATION

BINUS University | Computer Science, Cyber Security | 2024–2028 (expected)

Jakarta, Indonesia | GPA: 3.23 / 4.00

RELEVANT EXPERIENCE

Apprentice & Digital Forensics Challenge Author | PETIR Cyber Security | Mar 2026–Present

- Developed forensic challenges for IFEST 2026 and BeeCTF 2026, covering encrypted Linux volumes, filesystem carving, and a simulated malicious AUR package.
- Prepared reference writeups and validated intended investigation paths and solutions.

Deputy Coordinator, R&D | Cyber Security Community, BINUS | Oct 2025–Present

- Coordinate challenge authors and review contributions across competition categories.
- Built GitHub Actions workflows to synchronize challenge metadata with CTFd through ctfcli and deploy Docker services to a VPS over SSH.

Project Officer | National Cyber Week, CSC BINUS | Oct–Dec 2025

- Coordinated competition operations, an on-site IoT hacking final, and workshops on web security and adversarial AI.

R&D Activist | Cyber Security Community, BINUS | Feb–Sep 2025

- Authored file-carving challenges for CSC CTF 2025 and supported practical learning with Volatility and Wireshark.

SELECTED PROJECTS

SafeShare | Privacy tooling for AI conversations

https://github.com/darflashxd/safeshare

- Built a browser extension to detect and redact sensitive information in AI conversations, with a review interface for adjusting redactions before sharing.
- Implemented client-side AES-256-GCM encryption with WebCrypto and a sharing service using Cloudflare Workers. Available for users; development ongoing.

The Poisoned AUR | BeeCTF 2026 digital forensics challenge

https://github.com/PETIRsec/beefest-2026-qual

- Created a simulated Arch Linux package compromise with evidence across package logs, shell history, systemd, ELF binaries, and extended attributes; documented CLI and FTK Imager investigation paths.

TECHNICAL SKILLS

Forensics: Volatility 3, Autopsy, FTK Imager, Eric Zimmerman Tools, Wireshark; Windows/Linux artifacts

Detection: Splunk, Sysmon, Windows Event Logs | Development: Python, Bash, TypeScript, Git

Infrastructure: Linux, Docker, GitHub Actions, ctfcli | Concepts: MITRE ATT&CK, incident response

AWARDS & PROFESSIONAL DEVELOPMENT

Finalist, Wreck-IT 7.0 General CTF | Politeknik Siber dan Sandi Negara | Aug 2026 | Team HM Plenger

Blue Team Level 1 (BTL1), Security Blue Team — exam preparation in progress; certification not yet earned.
