AHMAD RAFI SUTANTO

Digital Forensics & Incident Response (DFIR) | Threat Analysis

Tangerang & Jakarta, Indonesia | +62 895-3831-57017 | rafisutanto@gmail.com | linkedin.com/in/rafisutanto | github.com/darflashxd | darflashxd.my.id

PROFESSIONAL SUMMARY

Undergraduate Cyber Security student at BINUS University specializing in Blue Team Operations, Digital Forensics & Incident Response (DFIR), and Threat Detection. Experienced in engineering 30+ national-level CTF challenges and leading 20+ technical authors across university security initiatives. Demonstrates hands-on capability in volatile memory triage, Windows/Linux artifact analysis, SIEM telemetry correlation, and CI/CD security automation. Seeking to contribute analytical problem-solving and cyber defense skills to KPMG Advisory (Internship / Co-op).

EDUCATION

BINUS University - *Jakarta, Indonesia* *2024 - 2028 (Expected)*
B.S. Computer Science - Cyber Security | GPA: 3.23 / 4.00

TECHNICAL SKILLS

- **Security Frameworks & Standards:** MITRE ATT&CK, NIST SP 800-61 (Incident Handling), ISO/IEC 27001 (Foundational), OWASP Top 10
- **Digital Forensics & Reverse Engineering:** Volatility 3, Autopsy, FTK Imager, Eric Zimmerman (EZ) Tools, Ghidra, x64dbg, JADX, APKTool, Wireshark/TShark
- **Blue Team & SOC:** Splunk SIEM, Windows Event Logs (EVTX), Sysmon, YARA Rules, Sigma Rules, Burp Suite
- **Systems, Cloud & DevOps:** Linux (Debian/Ubuntu/Arch) hardening, UFW, systemd, Docker, GitHub Actions, ctfcli, Git, Bash, Python 3

EXPERIENCE

Digital Forensics Apprentice & Challenge Author
PETIR Cyber Security *Mar 2026 - Present*

- Conduct advanced threat detection, network threat hunting, and data-exfiltration triage alongside senior security researchers.
- Designed and validated multi-stage forensic challenges for national competitions (IFEST 2026 UNPAD & BeeCTF 2026), simulating encrypted LUKS partitions, ext4 unallocated-block data carving, Linux PAM exploitation, and Arch Linux AUR supply-chain compromises.
- Authored comprehensive investigation writeups and automated solver/validation harnesses detailing dual-path analysis via CLI (Linux/WSL) and GUI forensics tools (FTK Imager).

Deputy Coordinator, Research & Development
Cyber Security Community (CSC), BINUS University *Oct 2025 - Present*

- Lead technical operations for CSC's R&D division and CTF competition infrastructure.
- Architected an automated CI/CD pipeline (GitHub Actions + ctfcli + Docker/VPS) for CSC CTF 2026, eliminating manual deployment on competition day.
- Coordinate 20+ challenge authors across 6 categories; review 79 pull requests, authoring 128 of 285 total commits (45%).
- Deliver hands-on workshops on volatile memory forensics and Windows event log triage.

Project Officer (PIC), National Cyber Week 2025
Cyber Security Community (CSC), BINUS University *Oct 2025 - Dec 2025*

- Spearheaded the organization of a flagship national cybersecurity event engaging 200+ university delegates across Indonesia (UI, ITS, UNDIP, etc.).
- Directed Indonesia's first on-site IoT Hacking CTF final round, preceded by an online Jeopardy qualification round hosted on CTFd.
- Curated workshops on Web Penetration Testing (OWASP/WSTG/OSINT) and Adversarial AI/ML Red Teaming.

Research & Development Activist
Cyber Security Community (CSC), BINUS University *Feb 2025 - Sep 2025*

- Authored digital forensics challenges for CSC CTF 2025 (raw disk imaging and network artifact analysis).
- Mentored new members on the Volatility and Wireshark toolchains.

FEATURED PROJECTS

SafeShare-AI - Zero-Knowledge Privacy Guard for GenAI
TypeScript, WebCrypto AES-256-GCM, Manifest V3, Cloudflare Edge | Black Hat Asia 2027 Arsenal (Private Research)

- Engineered a client-side zero-knowledge browser extension with multi-tier DLP and WebCrypto AES-256-GCM encryption, preventing enterprise PII exfiltration and mathematical data deduction across major LLM platforms.

CSC CTF Contest 2026 - Automated CI/CD Platform

GitHub Actions, Docker, ctfcli, Python, Bash | github.com/csc-research-binus/csc-ctf-contest-2026

- End-to-end pipeline auto-syncing challenge metadata to CTFd and deploying Docker containers to a VPS via SSH with zero manual intervention on competition day.

The Poisoned AUR - Threat Simulation & Forensics

Linux Forensics, systemd Journal, ELF Analysis, xattr, FTK Imager | github.com/PETIRsec/beefest-2026-qual

- Supply-chain attack simulation on Arch Linux with a multi-layer forensic trail: ALPM logs, persistence mechanisms, memory artifacts, and xattr encryption flags.

PulmoAI - Early Tuberculosis Detection Web App

TensorFlow/Keras, MobileNetV2, Flask, React, TypeScript | github.com/darflashxd/pulmoai

- Optimized the deep learning model from VGG to MobileNetV2, cutting model size 90% (from ~100MB to ~9MB) while reaching 99.65% validation accuracy.

CERTIFICATIONS & AWARDS

- Finalist, Wreck-IT 7.0 General Capture The Flag - Politeknik Siber dan Sandi Negara (Poltek SSN / BSSN), Aug 2026 - Team HM Plenger
- Blue Team Level 1 (BTL1), Security Blue Team - In Progress / Expected 2026 (24-hour incident response practical: PCAP triage, memory/disk forensics, SIEM threat hunting)

CTF COMPETITION TRACK RECORD

Competed across premier national CTFs: GEMASTIK CTF 2025 (Kemendikbudristek/Puspresnas) | FindIT! CTF 2025 (UGM) | Wreck-IT CTF 2025 (BSSN) | Polri Cyber CTF 2026 | Gundar CTF 2025 | PETIR REGEN26 2026
