SUMMARY

Cybersecurity undergraduate at BINUS University with hands-on experience in digital forensics challenge authoring, privacy tooling development, and CTF infrastructure automation. Finalist at Wreck-IT 7.0 national cyber competition. Seeking an internship in digital forensics, security operations, or defensive security engineering.

EDUCATION

BINUS University, School of Computer Science | Cyber Security | 2024–2028 (expected)

Jakarta, Indonesia | GPA: 3.23 / 4.00

RELEVANT EXPERIENCE

Apprentice & Digital Forensics Challenge Author | PETIR Cyber Security | Mar 2026–Present

- Developed forensic challenges for IFEST 2026 (Universitas Padjadjaran) and BeeCTF 2026: LUKS volume encryption, ext4 artifact carving, and a simulated malicious Arch Linux AUR package with multi-layer evidence trails.
- Authored reference writeups covering both Linux CLI and FTK Imager investigation paths; built automated validation solvers to guarantee challenge integrity.

Deputy Coordinator, R&D | Cyber Security Community, BINUS | Oct 2025–Present

- Coordinate challenge authors across six competition categories and review contributions for technical accuracy and solvability.
- Built GitHub Actions CI/CD workflows that auto-sync challenge metadata to CTFd via ctfcli and deploy Docker services to VPS over SSH, eliminating manual deployment on competition day.

Project Officer | National Cyber Week 2025, CSC BINUS | Oct–Dec 2025

- Led event operations for 200+ national university participants, including an on-site IoT Hacking CTF final and workshops on web penetration testing and adversarial AI.

R&D Activist | Cyber Security Community, BINUS | Feb–Sep 2025

- Authored file-carving forensics challenges for CSC CTF 2025 and mentored junior members on Volatility and Wireshark investigation workflows.

SELECTED PROJECTS

SafeShare — Privacy tooling for AI conversations

github.com/darflashxd/safeshare

- Built a browser extension that detects and redacts sensitive information (credentials, PII, API keys) in AI conversations, with a review interface for adjusting redactions before sharing.
- Implemented client-side AES-256-GCM encryption via WebCrypto and a sharing service on Cloudflare Workers with ephemeral burn-after-reading links. Available for users; actively developed.

The Poisoned AUR — BeeCTF 2026 digital forensics challenge

github.com/PETIRsec/beefest-2026-qual

- Simulated an Arch Linux package compromise requiring correlation across package logs, shell history, systemd journal, ELF binaries, and extended file attributes (xattr) to reconstruct the full attack timeline.

PulmoAI — Tuberculosis chest X-ray detection

github.com/darflashxd/pulmoai

- Optimized CNN model from VGG to MobileNetV2 via transfer learning, reducing model size by 90% while achieving 99.65% validation accuracy. Full-stack app with Flask backend and React frontend.

TECHNICAL SKILLS

Forensics & IR: Volatility 3, Autopsy, FTK Imager, Eric Zimmerman Tools, Wireshark; Windows/Linux artifact analysis

Detection & SIEM: Splunk, Sysmon, Windows Event Logs (EVTX), YARA Rules, Sigma Rules

Development: Python, Bash, TypeScript, Git, Docker, GitHub Actions, ctfcli

Reverse Engineering: Ghidra, x64dbg, JADX, APKTool

Frameworks: MITRE ATT&CK, NIST SP 800-61, OWASP Top 10

AWARDS & COMPETITIONS

Finalist, Wreck-IT 7.0 General CTF | Politeknik Siber dan Sandi Negara (BSSN) | Aug 2026 | Team HM Plenger

Competitor: GEMASTIK (Kemendikbudristek), FindIT! (UGM), IFEST (UNPAD), Polri Cyber CTF, Gundar CTF | 2025–2026

PROFESSIONAL DEVELOPMENT

Blue Team Level 1 (BTL1), Security Blue Team — exam preparation in progress; certification not yet earned.

6 published CTF writeups covering digital forensics, memory analysis, and web exploitation (darflashxd.my.id)
