

AHMAD RAFI SUTANTO

Blue Team & Digital Forensics - Cyber Security Student

Tangerang & Jakarta, Indonesia | +62 895-3831-57017 | rafisutanto@gmail.com | linkedin.com/in/rafisutanto | github.com/darflashxd | darflashxd.my.id

PROFESSIONAL SUMMARY

Undergraduate Cyber Security student at BINUS University specializing in Blue Team Operations, Digital Forensics & Incident Response (DFIR), and Threat Hunting. Proven track record designing 30+ national-level CTF challenges and leading 20+ challenge authors within the BINUS Cyber Security Community. Hands-on experience in volatile memory analysis, Windows/Linux artifact forensics, packet inspection, and CI/CD security automation.

EDUCATION

BINUS University - Jakarta, Indonesia

2024 - 2028 (Expected)

B.S. Computer Science - Cyber Security | GPA: 3.23 / 4.00

TECHNICAL SKILLS

- **Digital Forensics & Reverse Engineering:** Volatility 3, Autopsy, FTK Imager, Eric Zimmerman (EZ) Tools, Ghidra, x64dbg, JADX, APKTool, Wireshark/TShark
- **Blue Team & SOC:** Splunk SIEM, Windows Event Logs (EVTX), Sysmon, YARA Rules, Sigma Rules, Burp Suite
- **Systems, Cloud & DevOps:** Linux (Debian/Ubuntu/Arch) hardening, UFW, systemd, Docker, GitHub Actions, ctfcli, Git, Bash, Python 3

EXPERIENCE

Challenge Author, Digital Forensics

PETIR Cyber Security - IFEST 2026 (HIMATIF UNPAD)

Aug 2026

- Designed a "Dead Box" forensics challenge simulating an encrypted LUKS partition, ext4 unallocated-block data carving, and hidden keyfile extraction.
- Built a multi-stage attack scenario spanning Linux PAM log exploitation, Git object (zlib) extraction, and ELF binary analysis; delivered the official writeup and an automated solver/validation harness.

Challenge Author, Digital Forensics

PETIR Cyber Security - BeeCTF 2026 (Beefest, BINUS)

Aug 2026

- Designed "The Poisoned AUR," simulating an Arch Linux supply-chain compromise via a malicious AUR package.
- Constructed layered forensic evidence (ALPM logs, shell history, systemd journal, ELF headers, xattr) and authored a dual-path CLI (WSL2/Linux) and GUI (FTK Imager) investigation writeup.

Apprentice

PETIR Cyber Security

Mar 2026 - Present

- Conduct advanced threat detection and forensic problem-set analysis with senior security researchers.
- Execute Blue Team defensive simulations, network threat hunting, and data-exfiltration triage across server environments.

Deputy Coordinator, Research & Development

Cyber Security Community (CSC), BINUS University

Oct 2025 - Present

- Lead technical operations for CSC's R&D division and CTF competition infrastructure.
- Architected an automated CI/CD pipeline (GitHub Actions + ctfcli + Docker/VPS) for CSC CTF 2026, eliminating manual deployment on competition day.
- Coordinate 20+ challenge authors across 6 categories; review 79 pull requests, authoring 128 of 285 total commits (45%).
- Deliver hands-on workshops on volatile memory forensics and Windows event log triage.

Project Officer (PIC), National Cyber Week 2025

Cyber Security Community (CSC), BINUS University

Oct 2025 - Dec 2025

- Led organization of a flagship national event with student participants from UI, ITS, UNDIP, and other universities.
- Pioneered Indonesia's first on-site IoT Hacking CTF final round, preceded by an online Jeopardy qualifier via CTFd.
- Curated workshops on Web Penetration Testing (OWASP/WSTG/OSINT) and Adversarial AI/ML Red Teaming.

Research & Development Activist

Cyber Security Community (CSC), BINUS University

Feb 2025 - Sep 2025

- Authored digital forensics challenges for CSC CTF 2025 (raw disk imaging and network artifact analysis).
- Mentored new members on the Volatility and Wireshark toolchains.

FEATURED PROJECTS

CSC CTF Contest 2026 - Automated CI/CD Platform

GitHub Actions, Docker, ctfcli, Python, Bash | github.com/csc-research-binus/csc-ctf-contest-2026

- End-to-end pipeline auto-syncing challenge metadata to CTFd and deploying Docker containers to a VPS via SSH with zero manual intervention on competition day.

The Poisoned AUR - Threat Simulation & Forensics

Linux Forensics, systemd Journal, ELF Analysis, xattr, FTK Imager | github.com/PETIRsec/beefest-2026-qual

- Supply-chain attack simulation on Arch Linux with a multi-layer forensic trail: ALPM logs, persistence mechanisms, memory artifacts, and xattr encryption flags.

Detection & Forensic Reconstruction of NTFS Timestamping (Research)

Windows 11, USN Journal, \$MFT, EVTX Correlation

- Researching detection of anti-forensic NTFS timestamp manipulation (\$STANDARD_INFORMATION vs. \$FILE_NAME) via cross-artifact temporal correlation.

PulmoAI - Early Tuberculosis Detection Web App

TensorFlow/Keras, MobileNetV2, Flask, React, TypeScript | github.com/darflashxd/pulmoai

- Optimized the deep learning model from VGG to MobileNetV2, cutting model size 90% (from ~100MB to ~9MB) while reaching 99.65% validation accuracy.

CERTIFICATIONS & AWARDS

- Finalist, Wreck-IT 7.0 General Capture The Flag - Politeknik Siber dan Sandi Negara (Poltek SSN / BSSN), Aug 2026 - Team HM Plenger
- Blue Team Level 1 (BTL1), Security Blue Team - In Progress / Expected 2026 (24-hour incident response practical: PCAP triage, memory/disk forensics, SIEM threat hunting)

CTF COMPETITION TRACK RECORD

GEMASTIK CTF 2025 (Kemendikbudristek/Puspresnas - UNNES) | FindIT! CTF 2025 (UGM) | Wreck-IT CTF 2025 (BSSN) | PETIR REGEN26 2026 | Gundar CTF 2025 (Universitas Gunadarma) | Polri Cyber CTF 2026
